450 Wind, Solar & Telecoms Projects

Over the past 5 years we have provided planning and environmental services on over 450 wind, solar and telecoms projects right across the UK & Ireland.

The key to our success has been our track record at delivering excellent results very efficiently, our innovative skills, project management capability and the professionalism in our approach.

- Solar
- Wind
- Telecoms

95% Success Rate for Wind, Solar & Telecoms Planning Applications

Entrust has considerable experience and expertise in providing renewable energy and telecoms planning and environmental services across the UK & Ireland having provided services on 450 projects over the past 5 years.

Some of our recent wind projects include a 3.2MW development in which Entrust project managed the Environmental Statement and produced a number of specialist reports in-house including Landscape & Visual and Heritage statements as well as doing the actual planning application. Entrust recently won a Scottish Government exclusive contract to provide EIA and planning services for a 1MW wind energy development. We have also provided planning services on a significant number of individual wind turbine projects over the past number of years including 500KW turbine sites. We recently received consent for a 500KW wind energy project within 8 weeks of submission due to our comprehensive pre-planning strategy.

We are also one of the UK's leading Solar PV planning and environmental planning specialists. We are employed by a number of the country's leading solar developers and installation companies and we have delivered consent for a significant number of ground and roof mounted installations in areas including conservation areas and national parks and on listed buildings. We recently acted for a leading international solar developer to provide planning and due diligence services on a number of solar parks between 5MW and 30MW across England.

In January, Entrust was awarded the exclusive contract to undertake all the planning applications for one of Ireland's largest wireless network operators which is currently underway and managed from our Dublin office.
